Summary

The largest deviations from the age norm in this measurement are: relative beta2 power at Fz, eyes closed (z = -3.1); relative SMR power at Fz, eyes closed (z = -2.8); absolute theta power at Fz, eyes closed (z = 2.7); relative beta1 power at Fz, eyes closed (z = -2.4); relative theta power at Fz, eyes closed (z = 2.3). SUM-1

This list shows the 5 largest deviations by |z| and every deviation of 3 z or more; all values are in the result sections. SUM-RULE-1

Signal quality and processing

Eyes open: 164 of 180 seconds were analysed after artefact removal. Q-DUR-1

Eyes closed: 171 of 180 seconds were analysed after artefact removal. Q-DUR-1

VCPT: 1168 of 1220 seconds were analysed after artefact removal. Q-DUR-1

Accepted VCPT trials: Go 91, NoGo 92, Ignore 93, Novelty 95 (of 100 each). Q-TRIALS-1

Artefact removal changed by the clinician: component 6 (muscle, left temporal) was kept although the automatic cleaning proposed removing it; 2 of 19 components were removed. Q-ICA-MAN-1
